**FINAL TECHNICAL REPORT
NASA Grant NGL 33-010-186**

This grant supported theoretical work and data analysis on the dynamics and thermal structure of planetary atmospheres. Focus was on the neutral lower atmospheres of Mars, Jupiter, and Venus. The questions addressed were primarily related to observations by the Mariner 9 spacecraft to Mars, the Voyager mission to the outer planets, and the Pioneer Venus mission. The following publications presented the results of the work:

- Blumsack, S. L., and P. J. Gierasch, 1973: The vertical thermal structure of the Martian atmosphere: Modification by motions. *Icarus* 18, 126-133.
- Gierasch, P. J., A. P. Ingersoll, and R. T. Williams, 1973: Radiative instability of a cloudy planetary atmosphere. *Icarus* 19, 473-481.
- Gierasch, P. J., 1973: Jupiter's cloud bands. *Icarus* 19, 482-494.
- Gierasch, P. J., and O. B. Toon, 1973: Atmospheric pressure variation and the climate of Mars. *J. Atmos. Sci.* 30, 1502-1508.
- Sagan, C., J. Veverka, P. Fox, R. Dubisch, R. French, P. J. Gierasch, L. Quam, J. Lederberg, E. Levinthal, R. Tucker, B. Eross, and J. B. Pollack, 1973: Variable features on Mars II. Mariner 9 global results. *J. Geophys. Res.* 78, 4163-4196.
- Sagan, C., O. B. Toon, and P. J. Gierasch, 1973: Climatic change on Mars. *Science* 181, 1045-1049.
- Gierasch, P. J., 1974: The differential rotation of the solar surface. *Ap. J.* 190, 199-210.
- French, R. G., and P. J. Gierasch, 1974: Waves in the Jovian upper atmosphere. *J. Atmos. Sci.* 31, 1707-1712.
- Goody, R. M., and P. J. Gierasch, 1974: The influence of vorticity upon free convection. *J. Atmos. Sci.* 31, 1021-1027.
- Gierasch, P. J., 1974: Martian dust storms. *Rev. Geophys. and Space Phys.* 12, 730-734.

- Gierasch, P. J., 1975: Meridional circulation and the maintenance of the Venus atmospheric rotation. *J. Atmos. Sci.* 32, 1038-1044.
- Gierasch, P. J., 1975: Planetary atmospheres. *Rev. Geophys. and Space Phys.* 13, 790-793 and 863-871.
- Gierasch, P. J., 1976: Jovian meteorology: Large-scale moist convection without a lower boundary. *Icarus* 29, 445-454.
- French, R. G., and P. J. Gierasch, 1976: Diffraction calculation of occultation light curves in the presence of an isothermal atmosphere. *Astronomical J.* 81, 445-451.
- Elliot, J. L., R. G. French, E. Dunham, P. J. Gierasch, J. Veverka, C. Church, and C. Sagan, 1977: Occultation of ϵ Geminorum by Mars. II. The structure and extinction of the Martian upper atmosphere. *Astrophys. J.* 217, 661.
- Rossow, W. B., and P. J. Gierasch, 1977: The clouds of Venus. I. An approximate technique for treating the effects of coagulation, sedimentation and turbulent mixing of an aerosol. *J. Atmos. Sci.* 34, 405-416.
- Elliot, J. L., R. G. French, E. Dunham, P. J. Gierasch, J. Veverka, C. Church, and C. Sagan, 1977: Occultation of ϵ Geminorum by Mars: Evidence for atmospheric tides? *Science* 195, 485-486.
- French, R. G., P. J. Gierasch, and J. L. Elliot, 1978: Analysis of stellar occultation data: Effects of photon noise and initial conditions. *Icarus* 33, 186-202.
- Houben, H., and P. J. Gierasch, 1977: Jupiter's tidal Q due to atmospheric tides. *Proc. Symp. on Planetary Atmospheres, Royal Society of Canada*, 79-83.
- Flasar, F. M., and P. J. Gierasch, 1977: Eddy diffusivities within Jupiter. *Proc. Symp. on Planetary Atmospheres, Royal Society of Canada*, 85-87.
- Gierasch, P. J., 1977: The Martian general circulation. *Proc. Symp. on Planetary Atmospheres, Royal Society of Canada*, 163-166.
- Flasar, F. M., and P. J. Gierasch, 1978: Turbulent convection in rapidly rotating fluids. *Geophys. Astrophys. Fluid Dyn.* 10, 175-212.
- Gierasch, P. J., A. P. Ingersoll, and D. Pollard, 1979: Baroclinic instabilities in Jupiter's zonal flow. *Icarus* 40, 205-212.

- Marcus, Philip S., 1979: Stellar convection I. Modal equations in spheres and spherical shells. *Astrophys. J.* 231, 176-192.
- Bogart, R. S., and P. J. Gierasch, 1979: Meridional circulation and the redistribution of heat in the solar convective envelope. *Ap. J.* 228, 624-629.
- French, R. G., and P. J. Gierasch, 1979: The Martian polar vortex: Theory of seasonal variation and observations of eolian features. *J. Geophys. Res.* 84, 4634-4642.

The grant supported the following Ph.D. students. Their current places of employment are indicated:

Richard French (Wellesley)
 William Rossow (NASA Goddard Institute for Space Studies)
 Richard Bogart (Stanford)
 Howard Houben (NASA Ames Research Center)
 Joel MacAuslan (Itek Corporation)
 Julio Magalhães (NASA Ames Research Center)
 Fred Jaquin (Manlius Hill School)
 Andrew Weir (NASA Goddard Space Flight Center)

The following persons were supported by the grant as post-doctoral research associates. Their current places of employment are indicated:

Philip Marcus (Berkeley)
 Ralph Kahn (NASA JPL)
 Tim Dowling (MIT)
